Perfectub by Braktub

A real bathtub that's easier to step out of.

Brak Tub demonstration: stepping out and shower-chair fit, Perfectub vs. other tubs.

~3" between the feet when stepping out: one foot in the undercut instep, the other over the apron.

5.5° body lean stepping out, vs. about 17° for an ordinary tub, per Brak Tub's diagram *[PENDING: source]*.

17.33" overall height, BKTB-100 (19.33" for BKTB-300), per cut sheets *[NEED: step-over height at apron]*.

For bathers

Steady, upright posture. Thin side walls and a flat bottom let bathers step in and out without losing balance.

Shower chair sits flat and level. The flat surface accommodates a standard bathing seat or handicap shower chair.

Less water on the floor. The undercut is a built-in splash guard, keeping water in the tub.

Grip and warmth. The acrylic finish offers greater protection against slippage and holds bath heat.

For caregivers & facilities

Better reach. Narrower side walls make it easier to assist a bather, including caregiver-assisted bathing.

Wide, flat shower surface. Works as a shower and as a soaking tub.

Easy to clean. Smooth acrylic and a linear overflow with no metal frame to clean.

Fits renovations. A standard 60" alcove tub, and an alternative to a walk-in tub: no door, no wait to drain.

ADA: Brak Tub states that the 32" model (BKTB-300) meets ADA-compliant height guidelines. *[PENDING: confirm the exact standard and wording before publishing. This is not a certification.]*

Warranty: limited lifetime for the original residential purchaser; commercial installations (such as facilities) carry a 1-year warranty.

Perfectub is a bathtub designed for easier entry and exit. It is not a medical device, and no fall-prevention guarantee is made.
